

RAW MATERIAL INVENTORY

ASAP Industries maintains a large raw material inventory of forgings, solid bar, tube, and fasteners.

Raw material on the ground means ASAP can provide quick turnarounds, while the competition is waiting on a vendor.

ASAP meticulously maintains traceability of our material inventory. You can be sure that your equipment will arrive with the necessary reports to keep you compliant with industry regulations and on schedule.

High quality standards are critical to our operations. Our raw material inventory goes through non-destructive examination testing prior to use.

Our 4130 stock is purchased and documented to meet 75K yield, -75° F charpy testing with 20/15 Ft. lb. results.
